REDUCE COSTS BY IMPROVING PERFORMANCE

Quantitative measuring helps you to discover exactly where money can be saved. Some companies make the mistake of only measuring the energy consumption of the compressor while a smarter method is to measure the air consumption.

For a example, a modern compressor converts ~90% of the electrical power into heat and only 10% into compressed air. This makes compressed air ten times more expensive than electricity. To assure the effciency and effectiveness of a compressed air system, the measurement of flow is crucial.

SUPPORT SERVICES

SUTO is commited to the success of your business.

We offer world-wide service with our test and calibration labs in Germany, Hong Kong and China.

We are dedicated to technical expertise and precision in all of our prodcuts and services.

CONTENTS

SUTO is a leader and trusted global partner for reliable measurement and monitoring solutions for compressed air and gas systems.

Our wide range of products play a vital role in system processes of leading companies around the world.

Since our foundation in 2005, we offer our customers outstanding service and solutions and continue to innovate dependable measurement technology.

THERMAL MASS FLOW SENSORS
S401 / S421

Measure consumption and flow — **optimize process efficiency**

S421 inline type

S401 insertion type

S401 / S421 FEATURES

SMARTPHONE ANDROID APP
For remote configuration

ACCURATE RESULTS
Very fast response time

EASY PROCESS MONITORING
Effective and inexpensive measurements

TOTAL FLOW
High accuracy and reliable measurements

Optional color display for online values, consumption counter and sensor settings.
10-digit counter (1 999 999 999)

S401 / S421 FEATURES AT A GLANCE

- Measures standard flow, mass flow and consumption
- Thermal mass flow, independent of pressure and temperature changes
- IP65 casing provides robust protection in rough industrial environment
- Very fast response time
- High accuracy and wide measuring range
- Isolated mA and pulse output signals or Modbus/RTU interface
- Selectable gas type (Some gases require real gas calibration!)
- Sensor can be calibrated in 2 different gases

S401 BENEFITS

- Tube diameters of DN25 to DN500.
- 2 installation types: center installation and 100 mm insertion depth installation for bigger pipes (> DN250)
- Installation under pressure through 1/2" ball valve

S421 BENEFITS

- Pipes sizes available: DN15, DN20, DN32, DN40, DN50, DN65, DN80
- Fits your needs: various process connections available (R-thread, EN 1092-1 flange or ANSI flange)
- Exchangeable sensor unit (easy sensor swap)
- Optional flow conditioner, no need for a straight inlet anymore

S401 can be installed under pressure through a 1/2" ball valve. The sensor tip must be in the pipes center.

The S421 sensor unit can be easily removed for calibration. (Closing cap separately available)

Optional flow conditioner eliminates the straight pipe inlet requirement

Wireless connection allows the user to read the measurement values and change the configuration

General Specifications	
Accuracy	1.5% of reading + 0.3% full scale (Optional 1% of reading)
Repeatability	0.25% of reading
Sampling rate	> 10 samples / sec
Reference conditions	Can be set by user. Standard conditions are Ps = 0.1 MPa and Ts = 20°C
Medium conditions:	-30 ... +140°C / relative humidity < 90% no condensation
Transport Temperature:	-30 ... +70°C
Material:	Metal parts 1.4404 (SUS 316L) Casing PC + ABS Sensor: Ceramic with glass coating
Classification:	IP65
Electrical connection:	2 x M12, 5 poles (2 x M12 plug with screw terminals included)
Approvals:	CE, RoHS, FCC
Operating temperature	-30 ... +140°C fluid temperature -30 ... +70°C casing -10 ... +50°C casing with display
Operating pressure	**S401**: 0 ... 5.0 MPa (>1.6 MPa need installation device) **S421**: 0 ... 1.6 MPa (Optional: 4.0 MPa)
Analogue output	Signal: 4 ... 20 mA, isolated Scaling: 0 ... max flow Max load: 250R
Pulse output	Signal: Isolated switch output, normally open, Max 30 VDC, 20 mA Scaling: 1 pulse per consumption unit
Modbus output	Isolated RS-485 with Modbus/RTU protocol
Power supply	15 ... 30 VDC / 200 mA

THERMAL MASS FLOW METERS
S415 / S418

.SUTO

Monitor your flow — optimize process efficiency

S415 / S418 FEATURES

SMARTPHONE ANDROID APP
For remote configuration

POINT-OF-USE INSTALLATION
No straight pipe section required

COMPACT DESIGN
Can be installed anywhere

TOTAL FLOW
No bypass measurement

EASY PROCESS MONITORING
Effective and inexpensive recording

ACCURATE RESULTS
Integrated flow conditioner

The more accurate you can monitor gas flow, the more likely you will discover weak points in the process flow, thus ensuring continuity and profitability.

Asymmetric velocity profiles, swirl, and other factors caused by bends in pipes can lead quickly to inaccurate readings. And it is often not possible to place flow meters at hard-to-reach places.

The solution is our new generation of compact, easy-to-install, reliable and cost-effective flow and consumption meters: the S415 and the S418.

S415 / S418 BENEFITS

- Convenient installation, great flexibility, can be installed anywhere
- Available as DN8, DN15, DN20 and DN25 (G female thread)
- Eco version S415: Accuracy of 3% o.RDG, measuring volume 50: 1
- Pro version S418: Accuracy of 1.5% o.RDG, measuring volume 100: 1
- Pro version S418: Integrated data logger and integrated pressure sensor

S450 / S452 OPERATION PRINCIPLE

The SUTO flow sensor S450 is based on the thermal mass flow principle. It measures volumetric standard flow over a wide measuring range. The result is pressure and temperature independent.

The S450 is designed specifically for harsh environments.

The IP67 casing allows all-weather applications. All parts which come into contact with the measurement medium are made of stainless steel 316L. This allows applications in pharmaceutical and food industry, but also the measurement of corrosive and contaminated gas. Installations in explosive environments can be done through the optional ATEX approval. Various gases can be measured such as air, oxygen, argon, carbon dioxide, natural gas, hydrogen, methane, etc.. Basically any gas mixture can be measured as long the mixing ratio and its components are known and constant.

S450 / S452 FEATURES AT A GLANCE

- Direct measurement of mass flow and standard flow without the need of pressure compensation
- Wide range of tube sizes are supported with insertion type for big pipe diameters and inline types for small pipe diameters
- No moving parts, non clogging
- All parts which come into contact with the measurement medium are made of stainless steel 316L
- Robust metal enclosure suitable for outdoor applications in harsh environment
- Wireless interface for sensor settings on site
- Display showing flow rates, consumption, medium temperature and diagnostic results
- 2 analogue outputs (4 ... 20 mA) and 1 pulse output
- Available options:
  - Fieldbus interface: HART, Modbus
  - Hazardous approval ATEX: II 2 G Ex d IIC T4
    IECEx

PITOT TUBE FLOW / CONSUMPTION SENSOR S430

.SUTO

Measures air delivery at compressor discharge —
ideal flow meter for compressor performance tests

S430 FEATURES

SMARTPHONE ANDROID APP
For remote configuration

ACCURATE RESULTS
Very fast response time

EASY PROCESS MONITORING
Effective and inexpensive measurements

TOTAL FLOW
High accuracy and reliable measurements

S430 FEATURES AT A GLANCE

- Flow and consumption measurement in wet air or high mass flow / velocity applications
- Measurement at compressor outlet
- Tube diameters of 1.25" to 10" through center installation, bigger diameters through non-center installation
- Insertion type, easy installation under pressure through ball valve possible
- High temperature applications up to 230°C
- No mechanical wear parts
- All parts which are in contact with flow medium are made of stainless steel
- Compressor-FAD-Measurement
- Measures Flow, Consumption, Temperature and Pressure

S430 BENEFITS

The S430 is based on the pitot tube principle to measure flow. Properly installed (refer to instruction manual for details) the sensor can measure in wet and dirty gases as occurring, for example, at the discharge of a compressor.

The sensor features long term stability, wide turndown ratio and good temperature stability. It can be used in compressed air and non-corrosive gases.

The sensor can be installed through a ball valve while the system is pressurised.

Various output signals allow the sensor to be connected to SUTO displays and/or third-party displays and PLCs.

VORTEX STEAM FLOW METER
S435

Measures saturated steam consumption

S435 FEATURES

INTERGRATED TEMPERATURE SENSOR
Automatic density adjustment

ACCURATE RESULTS
Very fast response time
EASY PROCESS MONITORING
Effective and inexpensive measurements

TOTAL FLOW
High accuracy and reliable measurements

S435 BENEFITS

- Measures saturated steam
- Integrated temperature sensor
- Shows instant flow and consumption
- Display and keys for settings
- Small pressure loss
- Robust industrial design, high protection level
- Analog and Modbus output
- Wafer type — easy for installation
- No moving parts

Vortex flow meters are the ideal choice for steam measurements due to their robust design, without any moving parts and high temperature/pressure resistance. S435 provides mass flow and consumption measurements in saturated steam with automatic density compensation. This guarantees always accurate results. Parameter settings can be done through the user interface (keys and display) at the flow meter directly. Connection to a SCADA system is through the Modbus/RTU interface or the analog output available.

Please ensure that the steam parameters such as temperature, pressure and nominal flow are within the specification of S435.

S435 INSTALLATION

SENSOR
PT100, 3wire

PORTABLE
Connectable to S551
STATIONARY
Connectable to S330 / S331 series

S460 BENEFITS

Measurement of liquid flows and consumption such as:

- Chemical addition
- Cooling and heating water
- Drinking water
- Broad range of refined hydrocarbons
- Potable water
- De-ionized and demineralized water
- Sanitary flow rate measurements
- Purified water

S460 OPERATION PRINCIPLE

The S460 ultrasonic flow meter uses the proven clamp-on transit-time correlation technique. The ultrasonic transducers are simply clamped onto the outside of the pipe and never come in contact with the fluid.

The transducers are connected to a controller which is available as hat rail, or portable version. The stationary models can be connected to the S330 / S331 series of displays and data loggers where the portable model is connectable to the S551.

S409 BENEFITS

- Detects smallest changes < 0.1 m/s referred to 20°C and 1000 hpa
- No mechanical wear parts
- Easy installation under pressure

S409 OPERATION PRINCIPLE

The thermal mass flow direction switch S409 allows the detection of direction of the flow. It can be used in compressed air and non-corrosive gases.

The sensor element is very robust and completely of stainless steel. Through a 1/2″G-type ball valve the switch can be inserted into the pipe under pressure.

The flow and direction information is output through 2 normally open relay switches. The signals can be transferred to the SUTO flow sensor to activate and deactivate the flow measurement depending on the flow direction.

S220 BENEFITS

The SUTO dew point sensor S220 provides long term stable and reliable dew point measurements at very low dew points in industrial applications.

The sensor technology used in the sensor is developed by SUTO and offers superior measurement signals at very low moisture applications, allowing reliable measurements down to -100°C.

The included sinter cap protects the sensor from dust and other particles, this ensures a stable measurement and low maintenance at the same time.

The measured sensor data is transmitted via different signals. Depending on the selected model multiple measruement values, like dew point and pressure can be output at the same time. The various analog output options or digital Modbus outputs make the S220 the prefect dew point sensor to fit into any low moisture application.

- IP65 casing provides robust protection in rough industrial environment
- Fast response time ensures safe and reliable indication whenever dew points are out of valid ranges
- Can be installed directly into dryers through G ½" thread
- High accuracy of ±2°C dew point

S212 DIMENSIONS
The SUTO dew point sensor S212 provides reliable and long term stable dew point monitoring in industrial applications. The newly developed sensor features improved signal and stability in demanding industrial applications. It makes it an ideal choice for dew point measurements in desiccant dryers.

The measured dew point is output via a 4-20 mA signal output. The compact size of the sensor makes it an ideal choice for installations in tight environments. Sensor parameters such as analogue output scaling, alarm values, units, etc, can be easily changed by using SUTO service kit. This kit is used to connect the sensor to a PC for configuration changes.

- IP65 casing provides robust protection in rough industrial environment
- Very fast response time ensures safe and reliable indication whenever dew points are out of valid ranges
- Can be installed directly into dryers through G 1/2" thread
- High accuracy of 1 … 2°C dew point
- Withstands condensation
- M8 / M12 connector and cable with open wires

The SUTO dew point sensor S217 provides reliable and long term stable dew point monitoring in industrial applications. The newly developed sensor features improved signal and stability in demanding industrial applications.

It's designed for OEM applications in desiccant and refrigeration dryers. Through our new sensor technology paired with a compact casing, S217-OEM can be offered at very attractive prices. This allows applications in smaller dryers and point of use dryers using a more energy efficient dew point control.

The measured dew point is output via the loop-powered 4 … 20 mA signal or 3-wire 4 … 20 mA output. Sensor parameters such as analogue output scaling, physical units, can be set ex factory.

long term stable sensor element

DEW POINT
Measures down to -60°C Td

ALARM RELAY
React if your dew point changes

S201 BENEFITS

- Dew point sensor for low dew point applications down to -60°C Td
- Long term stability
- Graphic display
- Relay output for alarms
- IP65 casing provides robust protection in rough industrial environment
- Fast response time ensures safe and reliable indication whenever dew points are out of valid ranges
- Can be installed directly into dryers through G ½" thread
- High accuracy of ±2°C dew point

The SUTO dew point sensor S201 provides reliable and long term stable dew point monitoring in industrial applications. The newly developed sensor features improved signal and stability in demanding industrial applications.

The measured dew point is output via a 4-20 mA signal output. The integrated display shows online measurement values and alarm status. One alarm can be programmed which will activate a relay.

S201 features a complete dew point meter with sensor, display, keyboard and alarm.

Sensor parameters such as analogue output scaling, alarm values, units, etc, can be easily changed by using SUTO service kit. This kit is used to connect the sensor to a PC for configuration changes.

S305 BENEFITS

Refrigeration dryers are the most commonly used dryer type in compressed air system around the world. If the required drying is not achieved, the impact of wet air can be serious: Rust in the pipes, failures of machines, and a negative impact on product quality.

SUTO offers with the S305 a measuring device for dew point monitoring that kicks in alarm indications when drying values are not within the desired range.

The All-In-One dew point monitor serves as a measuring and display device. The connection to the compressed air network is via a 6-mm quick connect and corresponding connecting hose. The entire measuring unit is integrated together with the display in a rugged housing (IP65) and is available both as a panel variant or as a wall-mounted housing. Two alarm levels can be programmed (pre and main alarm), serving an optical indications or separate relay outputs. The dew point meter allows a simple and inexpensive dew point monitoring.

S505 BENEFITS

- Measures dew point, temperature and pressure (all in one instrument)
- 3 sensor solutions available:

    Q : 	-100 ... -30°C Td sensor for trace moisture applications

    P : 	-50 ... +50°C Td sensor for standard applications

    Q+P : 	covering the full range of dew point measurement
- Modern color touch screen interface
- Data logger, USB interface, wireless connection to portable printer
- Measuring / parking chamber for fast sensor response
- Application software included

With the S505 SUTO has combined next generation measurement technology with modern user interface design. The experienced user knows that dew point measurement also requires the measurement of line pressure (according to ISO 8573), since dew point is pressure dependent. With the S505 the line pressure is measured in combination with the dew point, so the user can be confident that the calculation is accurate and free from human error.

S505 comes with two sensor units: Sensor Q uses the new QCM technology which provides fast and accurate measurement results at dew points below –30°C Td down to –100°C Td. Sensor P is for high moisture applications from -50 ... +50°C Td where the SUTO polymer sensor is more suitable. Both sensors can be easily exchanged.

Additional features unique to the S505 include:

1. A modern, state of the art graphical user interface with touch screen functions for ease of operation similar to modern smart phones.

2. The data logger can record as many as 100 million values which are stored on a flash card. The card can be removed for fast transportation of the recorded information to your PC, or alternatively the information can be transferred or read via USB .

3. Using a portable printer on-site printouts can be created showing the measured values, location and date/time. Of course these values can be stored as well for report generation in your office.

4. S505 comes in a robust transport casing including measuring chamber, battery charger, USB cable and a Teflon® hose allowing for quick connection to the compressed air system and immediate measurements.

S330 / S331 OPERATION PRINCIPLE

The universal display and data logger can measure, display and record all relevant parameters (Flow, consumption, dew point, pressure, temperature, power consumption, compressor status etc.) in a compressed air system.

The SUTO S330 / S331 is a powerful yet cost effective local display, sensor interface and data logging (S331 only) solution for virtually any application. Up to 16 sensors can be connected to a single device allowing local nodes to be setup throughout the factory. With it's easy to use, high resolution 5" touch screen, information from all the connected sensors can be accessed locally making readings easy to access for those on the ground.

Modbus/RTU or Modbus TCP output data can be transmitted into the site's ethernet network allowing information to be viewed in real time via an existing SCADA system or with the simple and easy to use SUTO S4M software. S330 / S331 also provide IoT settings to connect with SUTO S4M software IoT version. Alternately locally logged data can be downloaded onto a USB memory card or directly to a computer through the USB port.

The S330 / S331 can display virtually any parameter from the connected sensors and with it's virtual channels can make calculations to help you measure and monitor efficiency or productivity, simplifying often complex tasks. Alarms can be set on each signal to your preselected parameters helping keep an eye on performance and indicating when there is a problem.

The S330 / S331 comes with a high resolution 5" colour touch screen interface making the operation as simple as possible.
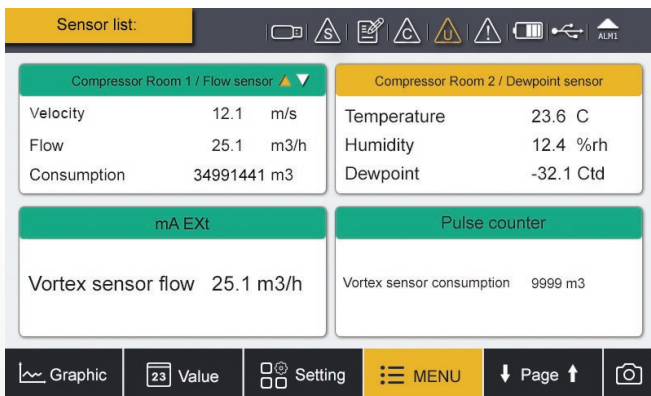

Up to 4 sensors can be viewed on one page and through page scrolling further sensors can be displayed.
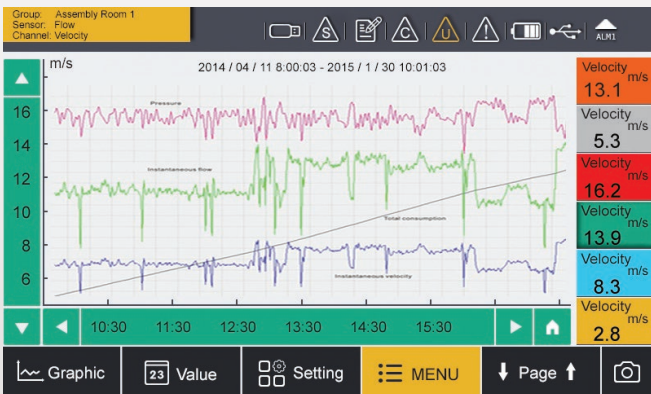

Select which channels you want to view or analyze and the built in graphic analyzer will help you identify problems immediately.

For detailed analysis we recommend using SUTO S4M software.

Modbus-Master input for Modbus/RTU sensors

The S330 / S331 includes digital inputs for SUTO sensors or Modbus/RTU sensors. In order to connect the Modbus/RTU sensors properly on a RS-485 bus system it's recommended to daisy-chain the sensors to one of the inputs. For this purpose we offer a RS-485 splitter to simplify the connection. Through this method you can add up to 16 sensors to the master input. (In this case additional power supply is required.)

S551 TOUCH SCREEN OPERATION
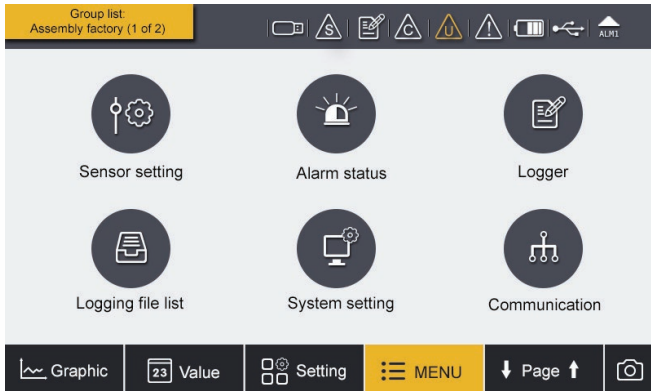

The S551 comes with a high resolution 5" colour touch screen interface making the operation as simple as possible.

SUTO intelligent sensors are detected automatically on power-up. With a few settings the data logger is ready for operations with virtually unlimited memory size.
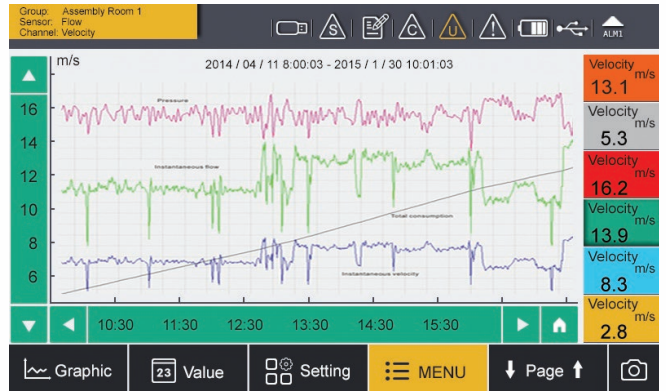

Select which channels you want to view or analyze and the built in graphic analyzer will help you identify problems immediately.

For detailed analysis we recommend using SUTO software S4A, CAA or S4M.
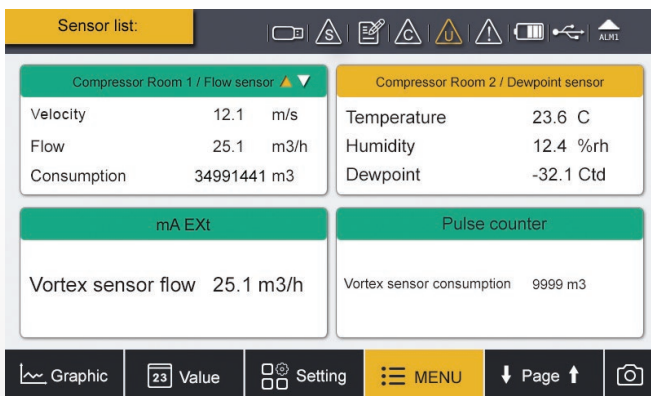

Up to 4 sensors can be viewed on one page and through page scrolling further sensors can be displayed.

S551 DATA ANALYSIS WITH THE COMPRESSED AIR ANALYZER
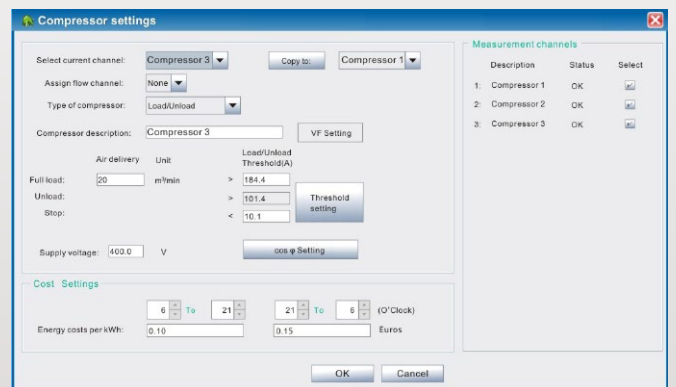

Through SUTO software S4A recordings are downloaded to the PC via USB or Ethernet port. The basic analysis can be done in S4A.

For more sophisticated compressor analysis the SUTO CAA software offers many advanced features such as: performance statistics of compressors (efficiency, air delivery, load/unload cycles), leakage analysis, report generation and more. Comparisons with base line measurements from last year or last month help to identify system changes.

S4M is the complete monitoring solution for your energy management. It delivers real-time analytics of installations and can identify potential issues before they happen. S4M intelligently gathers, compares and analyses data to help compressed air users increase maintenance and service efficiency, make energy savings easy, quick and rewarding.

By server installation, and using the latest web technology, S4M is designed to provide cloud based service or local server installation, which allows user to monitor and collect granular, real-time energy consumption data of individual compressed air system anywhere at any time.

S4M BENEFITS

- Easy to use monitoring solution
- Simple installation with installation wizard
- Browser / Server Architecture. Client is independent from any operation system.
- Alarm monitoring and indications on screen, relay, e-mail and SMS
- Graphical data analysis
- Multiple languages
- Third-party support
- Scalable to fit your application

S4C-FS BENEFITS

- Android-based App, easy to install and use
- Quick access to sensor configuration by scanning QR code
- Easy configuration for sensors in places difficult to reach
- Supports multiple languages: English, German, and Chinese.
- Supports multiple SUTO flow sensors
- Provides varieties of sensor settings: Flow settings, units settings, reference conditions, factory settings, counter settings, and output settings

S4C-FS supports the following SUTO flow sensors:
- S415 / S418
- S401 / S421
- S430

DATA LOGGER
Integrated as option

The S120 oil vapor sensor monitors the oil content of compressed air and gases permanently or for spot checks when used as portable unit in conjunction with S551. For best accuracy and long term stability, the S120 sensor applies an automatic calibration. Sensor contaminations and sensor life time are monitored and indicated to the user. An 'over range' detection removes the sampling air from the sensor to protect it against contamination.

The simple installation and outstanding performance makes the S120 the ideal choice when oil vapor content needs to be measured and monitored.

S120 BENEFITS

- Can be used for permanent or in portable applications
- Measures down to 0.003 mg/m³
- Easy connection through sampling hose and quick connect
- Output signals: - 4 ... 20 mA
  - RS-485, Modbus/RTU
  - Relay switch (NO)
- PID sensor for highest accuracy
- Service and Alarm indication through LED
- Connectable to SUTO displays and data loggers as well as third parties displays and control units
- Integrated 5" touch screen and data logger (option)

● Power
● Alarm
● Service Sensor
● Service Filter

LEDs indicate if pre-set alarms are reached, or if filters and sensors need to be serviced. The service indications start blinking 4 weeks before expiring and turn on permanently when a service is immediately required.

S120 TECHNICAL DATA

General Specifications	
Measuring medium	Compressed air and gases free of corrosive, aggressive, caustic and flammable constituents
Measuring range	0.003 ... 10.00 mg/m^3 (based on 1000 hPa (a), 20°C, 0% relative humidity)
Resolution	0.001 mg/m^3
Sensor type	PID (photoionization detector)
Detection limit	0.003 mg/m^3
Accuracy	5% of reading ±0.003 mg/m^3
Operating pressure	3 ... 15 barg (higher pressure on request)
Gas humidity	< 40% rel. humidity, no condensation
Sample flow rate	< 2 l/min, measuring gas is released to ambient
Gas connection	6 mm quick connect
Electrical connection	M12 connector
Sensor life time	6000 operating hours. Will be indicated. Sensor exchange by service
Gas temperature	-20 ... +50°C (at inlet)
Ambient conditions	-20 ... +50°C
Transport temperature	-30 ... +70°C
Output signal	4 ... 20 mA (0 ... 10 mg/m^3) RS-485, Modbus/RTU Relay: NO, 60 VDC / 1A
Power supply	24 VDC ± 5%, 10 W
Display & data logger	5" touch screen, 100 million values (option)
Application	Downstream of activated carbon filters Downstream of oil-free compressors Wherever upstream drying and filtration is applied
Casing/dimensions	PC, Al alloy, 271 X 205 X 91 mm
Classification	IP65
EMC	According to IEC 61326-1
Settings	Various sensor settings can be performed through SUTO display units or through the related service software
Weight	2400 g
Sample rate	1 s

S130 / S132 OPERATION PRINCIPLE

The S130 / S132 is a new generation laser particle counter optimized for applications in compressed air or compressed gases. With quality in mind and with the knowledge of customer needs this instrument is designed for continuous operation 24 hours, 7 days a week.

In an alternative version all models are also available for measurements under ambient conditions by means of an internal vacuum pump. These instruments can fulfill the requirements stipulated in the compressed air standard ISO 8573-4. Measurement values represent the particle counts per ft³, l or m³ or alternatively in µg/m³. Settings can be done through the integrated display, an external SUTO display or through the service software.

ISO 8573 compliant purity quantifications of compressed air systems are bound to time-consuming installations and long-lasting test runs ... It's time for a revolution: The S600 is unlike its competition.

It combines the latest sensor technology, software-guided measurements and a time-saving setup into a handy, touch-screen controlled multi-tool. With our S600 you will finish measurement runs in much less time than with your traditional method, after that you don't ever want to leave your new comfort zone again. Trust us.

S600 BENEFITS

- All-in-one device measures Particle concentration, dew point and oil vapor
- Measures additionally the temperature and pressure
- Software guided measurement makes it easy to generate reliable results
- Report generator creates PDFs for audits
- Ultra portable and compact design
- Compressed air connection via 6 mm tube
- Integrated data logger saves data for later analysis

ALL IN ONE
Dew point, particle and oil vapor

The S601 combines three major quality measurements into a single wall mountable device. Optimized to be used as Plug & Play system, the S601 helps users to identify the air quality at a glance.

The robust cabinet makes is well suited for rough industrial applications. A stainless steel cabinet is offered on request, which is suited for pharmaceutical and medical applicaitons.

The S601 combines the latest sensor technology and a time-saving setup into a one of its kind multi-tool. Mount it, power it, connect it and measure. Trust us, it is that easy.

S601 BENEFITS

- All-in-one device measures particle concentration, dew point and oil vapor
- Measures additionally the temperature and pressure
- Open protocol outputs integrate it into your management system
- Modbus/RTU (RS 485) and Modbus TCP (Ethernet) included
- Compact design and easy setup
- Compressed air connection via 6 mm tube
- Integrated data logger saves data for later analysis

S601 FEATURES

The S601 is the stationary multi-tool for compressed air purity measurements. It measures, records and validates quality parameters like particles, dew point, oil vapor contents, temperature and the pressure of compressed air systems. It offers different signal outputs to seamlessly integrate it into your system. The integrated logger stores the recorded values safely.

LEAK DETECTOR FOR PNEUMATIC SYSTEMS
S530

Find possible leaks —
save costs of
running compressors

S530 FEATURES

EASY TO USE
Find leaks in minutes

NOISE ISOLATED HEADSET
Inaudible signals easily to be heard

LASER POINTER
To spot the leak

LONG BATTERY LIFE

COMPACT DESIGN
Can be used anywhere

Leaks in compressed air systems can significantly increase the cost of compressed air.

The detection of leaks is an important maintenance requirement which can be done by soapy water or in a more convenient way with ultrasonic leak detectors like S530.

S530 APPLICATIONS

- Leak detection in compressed air, refrigerants, simply of any gas!
- Insulation test of doors and windows
- Detection of partial electrical discharges causing damages on insulations

S530 OPERATION PRINCIPLE

When gases are leaking through tubes and tanks, an ultrasonic sound is produced which can be detected by the S530 even from several meters away. The S530 transforms these inaudible signals into a frequency which can be easily heard by using the supplied noise isolated headset. The integrated laser pointer helps to spot the leak from distance. In unpressurized systems, an ultrasonic tone generator can be used whose sound will leak through small openings.

Cost saving

Compressed air is one of the most expensive energy forms. In Germany alone, 60,000 pneumatic systems consume 14,000,000,000 kWh electricity every year. 15% to 20% of this could easily be saved (Peter Radgen, Fraunhofer Institute, Karlsruhe). A large portion of these costs are caused by leaks in compressed air systems, allowing the air to "escape" unused.

Calculation example at 0.6 MPa:

1 hole of 1mm diameter = 270 EUR/year

S531 APPLICATION

S531 is an ultrasonic leak detector that helps users quickly find and record leakages in compressed air or any gas systems. The built-in touch screen assists the user easy operation in leak detecting. Photographing and voice recording make leak surveys more flexible and efficient.

S531 is designed to work with SUTO LMS (Leak Management System) to enable companies to properly manage their leakage detection and repair activities, either through cloud based service or local server installation.

S110 OPERATION PRINCIPLE

The S110 Power Meters are designed for easy installation and high accuracy. They measure the actual power consumption in kW and accumulate the Energy consumption in kWh of a 3-phase load.

The S110 can measure other parameters such as current, voltage, cos phi etc. Hat rail, wall mountable and portable versions are available.

S110 TECHNICAL DATA

General Specifications	
Nominal voltage (L-N, L-L)	100 ... 500 VAC
Voltage measurement	3PH4W, 3PH3W, 1PH2W
Clamp sensor input range	(333 mV only) external Rogowski coil
Available clamp sensors	Rogowski coil 1 ... 100 A 10 ... 1000 A 30 ... 3000 A
Power range	up to 2000 kW (depends on Rogowski coil)
Accuracy	Voltage 0.2% Current 0.5% Clamp Class 1 Energy Class 0.5
Output	Modbus/RTU
Supply	24 V DC / 3.5 W
Operating Temperature	-25 ... +55°C
Dimensions	Hat rail version 122 x 87 x 23 mm Portable 177 x 177 x 60 mm

S110 INSTALLATION
In above illustration a power meter is installed directly into the connection box of the compressor. The Rogowski coils can be easily fixed. The voltage connection can be drawn from other available connection points. A separate cable connects the S110 power meter to the S330 / S331 with Modbus/RTU and 24 VDC power supply. The power meter could also be installed into the connection cabinet where the power supply for the compressor is coming from. If no hat rail mounting is available, there is a wall mountable version of the S110 power meter.

S330 / S331 can be used as stationary display of up to 16 power meters

S110-P, portable solution power meter, to be connected to the S551
Rogowski coils with wide measuring range, high accuracy and easy installation (Note: for each phase you must order 1 coil)

CURRENT CLAMP SENSOR

Current clamp sensor —
Rogowski Coil for wide range at high accuracy
SUTO current clamp sensor is an AC RMS current sensor composed of a flexible active part (Rogowski coil model) connected to a compact digital converter, capable of measuring the current carried on a power conductor up to a value of 3000 A AC.

The digital converter supplies an output of 4-20 mA DC in linear proportion to the measured current.

CURRENT SENSOR APPLICATION

- Current sensing at compressors for load / unload analysis

- Data logging over days and weeks

SUTO provides a calibration service for all its sensors as well as on-site testing. Please contact our service for inquiries. Dew point and flow calibration service is performed in the SUTO Test & Calibration Labs in Germany and China (Asia market). For other physical units we have contract partners in Germany. All references are traceable to national standards and are re-calibrated in regular intervals.

DEW POINT CALIBRATION SERVICE

- Accuracy: 0.1°C Td
- Calibration range: -75 ... +15°C Td
- Reference: Dew point mirror MBW 373

FLOW CALIBRATION SERVICE

- Accuracy: 0.65% of reading
- Pressure: 0 ... 0.6 MPa
- Medium: Air, other gases on request

- Calibration range: 0 ... 4000 sm³/h
- Pipe diameter: DN8 ... DN100
- Reference: Sonic Nozzles, Laminar Flow Elements, Turbine meters

TEST AND CALIBRATION ORDERING

Please use the following table to assist in placing your order with our sales staff.

Test and Calibration	
Order No.	**Description**
R200 0001	Flow calibration with certificate
R200 0120	**General service and re-calibration:** - General inspection of the unit - Assembly and test of unit - Replacement of tubes and fittings - Calibration of oil sensor S120 - Cleaning of lamp and sensor
R200 0030	Pressure sensor calibration 16bar(g) type, at 3 points
R200 0600	**S600 calibration and service:** - General inspection of the unit - Cleaning of components - Replacement of tubes and fittings - Assembly and test of unit
R699 3396	Dew point sensor calibration
R200 0050	Dew point calibration, one additional point, freely selectable in the range -75 ... +20°C Td
R200 0130	Calibration for Particle Counter S130
R200 0131	Calibration for particle counter S131
R200 0601	S601 Main unit exchange including dew point sensors
R200 0602	S601 Oil vapor sensor exchange
R200 0603	S601 Particle counter 0.3 µm type exchange
R200 0604	S601 Particle counter 0.1 µm type exchange
R200 0005	Oil-& grease-free cleaning option for flow sensors (For Oxygen, it is already included in A1009.)

ACCESSORIES ORDERING

Please use the following table to assist in placing your order

	C190 0002	
	Description	Closing cap for S421/S452 material: 1.4404
	Application	To close the measuring sections in case the sensor unit is removed
	C190 0060	
	Description	Thread adaptor, G1/2' internal to PT1/2' external, SUS303
	Application	Used to adapt S401 or S450 to a PT thread ball valve
	C190 0065	
	Description	Thread adaptor, G1/2' internal to NPT1/2' external, SUS303
	Application	Used to adapt S401 or S450 to a NPT thread ball valve
	C190 0116	
	Description	Flow conditioner
	Application	Wafer type flow conditioners, which is flanged between two flanges 5-8 times diameter upstream of the flow meter. Please specify nominal pipe diameter and pressure
	A530 1105 / A530 1106 / A530 1111 / A530 1113	
	Description	High pressure installation device. To be used for pressure > 1.5 MPa
	Application	For safety reasons we recommend using this installation device whenever the operating pressure exceeds 1.5 MPa * A530 1105 - High pressure installation device for S400/S401-220mm * A530 1106 - High pressure installation device for S450-220mm * A530 1111 - High pressure installation device for S400/S401-400mm * A530 1113 - High pressure installation device for S450-400mm
	A530 1108	
	Description	SUTO spot drilling device
	Application	This drilling tool is used to drill holes into compressed air pipes under pressure through a ball valve
	A553 0121	
	Description	Sensor cable, 6 poles, AWG22, 7.5 mm outer diameter, w/ shielding, black (per meter)
	Application	Sensor cable for S450 sensor, US flow meter and power meter
	A553 0122	
	Description	Sensor cable, 5 poles, AWG24, 5.0 mm outer diameter, black (per meter)
	Application	Standard sensor cable for flow and dew point sensors
	A553 0123	
	Description	RS-485 cable 3 poles with shielding, AWG 24
	Application	RS-485 connection cable

	A553 0104	
	Description	Sensor cable 5 m, with M12 connector, open wires, AWG24 (0.2 mm²)
	Application	Cable can be used to connect SUTO sensors to a PLC or power supply
	A553 0105	
	Description	Sensor cable 10 m, with M12 connector, open wires, AWG24 (0.2 mm²)
	Application	Cable can be used to connect SUTO sensors to a PLC or power supply
	A554 0009	
	Description	Power supply for hat rail, input: 85 ... 264 VAC, output: 24 VDC, 60W
	Application	This power supply can be used to supply sensors with 24 VDC/2.5A It's mounted on a hat rail
	A554 0007	
	Description	Power supply wall mountable, input: 85 ... 264 VAC, output: 24 VDC, 15W, without cable
	Application	This power supply is used to supply 24 DC to sensors and other devices
	A554 0008	
	Description	½" G type ball valve
	Application	This is a proper ball valve for the installations of flow sensors S401 / S450
	P554 0009	
	Description	Wall thickness meter
	Application	The instrument is used to measure the wall thickness of pipes. Too often the inner diameter of pipes is not exactly known, but this information is required for an accurate flow measurement. By measuring the wall thickness and the pipe size the exact inner diameter can be calculated
	A554 0107	
	Description	Mains unit 100-240 VAC/24 VDC, 0.5A for S401 / S201 series, 2 m cable
	Application	Simple power supply for a portable S421 or S401 solution (Special plug on request)
	A554 2005	
	Description	Service kit for sensor configuration including software
	Application	This service kit can be used for all SUTO sensors to change settings and check sensors

	A699 3491	
	Description	Measuring chamber, 2 l/min @ 0.8 MPa, fast connector, without filter, max pressure 1.5 MPa, suitable for all SUTO dew point sensors
	Application	For easy connection and disconnection to compressed air system through quick-disconnector
	A699 3493	
	Description	By-pass-type chamber with 6 mm hose in and out connection up to 1.5 MPa
	Application	This chamber can be used in applications where the measured gas is by-passed through the chamber
	A699 3500	
	Description	Measuring chamber, 4 l/min @ 0.8 MPa, hose fast connector, with filter, recommended pressure range 0.3 ... 1.5 MPa, convenient dew point measurement of gas/air with S505
	Application	The sample gas/air is connected to the chamber through a 6 mm Teflon® hose The chamber is mounted to the S505 through the 1/2 " G-type thread connection. Parking and measurement position is selected through the handle at the chamber, which allows quick measurement results
	A699 3501	
	Description	By-pass-type chamber with 6 mm hose in and out connection up to 1 MPa, convenient dew point measurement of gas/air with S505
	Application	This chamber can be used in applications where the measured gas is by-passed through the chamber to avoid any gas/air loss. The chamber is mounted to the S505 through the 1/2 " G-type thread connection Parking and measurement position is selected through the handle at the chamber, which allows quick measurement results
	A699 3496	
	Description	Measuring chamber for dryer installation, 2 l/min @ 0.8 MPa, hose fast connector, without filter, max. pressure 1.5 MPa
	Application	The sample gas/air is connected to the chamber through a 6 mm Teflon® hose The chamber is mounted to stationary S2XX dew point sensors through the 1/2 " G-type thread connection. This chamber can be conveniently mounted to the frame or cabinet of a dryer
	A699 3690	
	Description	Chamber for atmospheric pressure dew point
	Application	This chamber is used where the gas is supplied under pressure (up to 1.0 MPa) but the measurement should be under atmospheric conditions The measurement result will be atmospheric dew point
	A699 3590	
	Description	High pressure chamber up to 35 MPa
	Application	In applications where the pressure is exceeding 1.5 MPa, this chamber can be used. Through the adjustable valve a small purge is set to ensure a gas flow through the sensor element (response time)

	A554 0054	
	Description	Compressed air quick coupling, female side R ½" thread
	Application	Connect this quick coupling to a 1/2'' ball valve to set up a quick connector for measurement of dewpoint, oil and particle
	Dew point sensor protection caps	
	Application	Protection caps are used to protect the dew point sensor element from machanical impacts or dust. The proper cap selection depends in application Please contact customer service
	A554 0002	
	Description	Test pot 11.3% rH
	Application	Is used to check dew point sensors. The pot creates a constant relative humidity of 11.3%. The resulting dew point is depending on the ambient temperature, at 25°C it is equal to -6.3°C
	D500 0005	
	Description	S51 panel meter, with 4-20 mA input and 2 alarm outputs, 85 ... 240 VAC supply, 96 x 48 mm panel
	Application	Installations in dryers or similar equipment as dew point indicator
	C219 0055	
	Description	M12 connector with RS-485 termination resistor, 120 Ω
	Application	Termination resistor for enhancing communication stability of RS-485 network Connect it to the final device of RS-485 network
	A554 3310	
	Description	M12 RS-485 (Modbus) splitter
	Application	Stationary Modbus splitter for easier wiring
	A554 0013	
	Description	RS-485 / Ethernet gateway Protocol: - Modbus/RTU - Modbus TCP
	Application	Converts RS485 physical layer to Ethernet and RTU protocol to Modbus TCP protocol.
	A554 0011	
	Description	RS-485 Repeater
	Application	A repeater is used whenever the bus length of RS-485 exceeds 500 m. After every 500 m of cable distance a repeater is recommended.

	A554 0331	
	Description	RS-485 / USB converter
	Application	This converter brings RS-485 to the USB port of the PC.
	D554 0031	
	Description	Current meter, 0-20 mA, 8 channels, Modbus/RTU
	Application	For connecting up to 8 sensors with 0 ... 20 mA / 4 ... 20 mA signal via RS-485 to S330 / S331.
	D554 0032	
	Description	Pulse meter, 7 channels, Modbus/RTU
	Application	For connection up to 7 sensors with pulse output signal via RS-485 to S330 / S331.
	A554 0087	
	Description	USB OTG memory stick
	Application	USB memory drive for transferring data between SUTO data loggers (S331 / S551 / S120 with display / S130 with display) and a PC. The USB drive has a USB-A and a Micro-USB connector.
